SUBJECT: Product Support for the AtlasSC Product Line

Woodward's AtlasSC Product Line was introduced in 2002 for turbine, engine, compressor and generator applications. This product line is still selling with several key customers, however electronic component obsolescence is making it more and more difficult to manufacture the "Smart Core" PC Board Assembly used in the Atlas SC. For this reason Woodward is declaring End of Life for 2020, with support out an additional 10 years to 2030.

The Atlas II is a more capable control which is available similar expansion board configurations as an Atlas SC (i.e. with Powersense, EBX, etc.). Customers using the Atlas SC should plan to transition new systems over to the Atlas II before the End of Life date indicated below.

Atlas SC Product Line:

Feb. 1, 2020:

End of normal production life, product line becomes "Non-Preferred"
Unlimited Spare units available
Unlimited repairs available

Feb, 1, 2025 – Feb 1, 2030

Repairs based on parts availability
Replacement/Exchange with available Service Stock

Feb. 1, 2030 on

Replacement/Exchange with available Service Stock (no repairs)

Due to the nature of electronic components, Woodward is often notified of last time buys for various components. Woodward strives to hold inventory or find alternative parts when electronic components are discontinued. However, there are times when components can simply not be obtained and where sufficient last-time buys cannot be made. Due to these issues outside our control, Woodward cannot guarantee the rationalization support plan.
