SUBJECT: Product Support for E3 (PCM-HD) Gas Engine Control Systems

The Woodward E3 Gas Engine Control systems platform is an important product line to Woodward. However, due to the unavailability of certain components, Woodward has resolved to cease production of these products effective immediately and will not be able to accept any additional orders.

The Woodward E3 Gas Engine Control platform includes a wide range of different systems, ranging from the E3-FA (Full Authority – TecJet based) system to the E3-LBT (Lean Burn Trim) system.

It's Woodward's vision and strategy that an integrated control system is the best and most cost effective solution for the future. Therefore the E3 successor product is based on the Woodward LECM (Large Engine Control Module) and is called the E6 platform. All the variants of the E3 will be supported through the E6 platform and standalone versions of LECM will be available to support field retrofit.

Please contact your local account manager to learn how the E6 platform could best meet your application needs.

July 1, 2018 to October 2022:

- Repairs based on parts availability
- Replacement product utilizing same algorithms and logic where applicable

Parts obsolescence from electronic manufacturers can present a challenge to post-life support plans. Woodward strives to hold inventory or look for alternative parts when components reach their end of life. However, there are times when components cannot be obtained and where sufficient last-time buys cannot be made. In these cases, Woodward cannot always guarantee that we can maintain the rationalization support plan.

Yours sincerely,

Sai Venkataramanan
