

Subject: Product rationalization statement for legacy EGCP-1 controls

The EGCP-1 line of controls was very important to Woodward. It set the foundation for more sophisticated power management controls such as easYgen lines. Due to component obsolescence issue, Woodward was forced to cease the production of these devices in early 2000.

The EGCP-1 product line included following part numbers:

Part Number	12 Vdc Supply Voltage	24 Vdc Supply Voltage	Nominal PT Input Voltage Range	Nominal CT Input Current Range
8406-020	X		90-277 Vac rms	0-5 A rms
8406-021		X	90-277 Vac rms	0-5 A rms

This product rationalization statement is to notify customers that the EGCP-1 controls have already reached their end of life and are inactivated. Customers are encouraged to contact their local Woodward representative for assistance in upgrading their genset control panel with Woodward's new product offerings. Woodward developed a load share gateway that bridges communication between the EGCP-1 and the easYgen control. This allows for a smooth transition to the easYgen product line. Further details are available on the respective product pages.
