SUBJECT: Product Support Plan for Gas Engine Control (GECO™) Air/Fuel Ratio Control System

The Woodward GECO product line is very important to Woodward. However, due to the increasing support costs, lack of obtainable components, and declining sales, Woodward has resolved to cease production of this product line. Woodward has produced and supported the GECO product line for many years and will continue to offer support for it as described in the support schedule below.

The GECO product line includes:

- GECO Stoichiometric Model 100 – product spec 03553
- GECO S100 Lean Burn – product spec 03251
- GECO Vista Air/Fuel Ratio Controller – product spec 03349

Woodward's E3 System (Rich and Lean Burn versions) replaces the functionality offered by the GECO. You can learn more about the E3 system on the Woodward.com website by clicking [HERE](#). Please contact your Woodward account manager to learn which E3 product will best meet your application needs.

Woodward will commit to the following GECO product line support plan:

Now through September 30, 2015:

- Regular supply of new parts, service parts and repairs – subject to continued parts availability

October 1, 2015, to September 30, 2020:

- Limited spare modules based on part availability
- Repairs based on parts availability
- Replacement/exchange with service stock

October 1, 2020, forward:

- Availability of design drawings such that customer can produce the part themselves (with signed "Proprietary Drawing and Assumption of Liability and Release Agreement")

Parts obsolescence from electronic manufacturers can present a challenge to post-life support plans. Woodward strives to hold inventory, or look for alternative parts when components become obsolete. However, there are times when components can simply not be obtained and where sufficient last-time buys cannot be made. In these cases, Woodward cannot always guarantee that we can maintain the rationalization support plan.
