SUBJECT: TG611 Conversions Authorization Statement

To: Woodward Authorized Independent Service Facilities

The Woodward TG611-13 and TG611-17 product lines are self-contained mechanical-hydraulic speed-droop governors for use on small steam turbines driving pumps, compressors, or generators, where isochronous (constant speed) operation is not required. Designed for API-611 based turbine applications, these governors include a special Overspeed Test Device, allowing controlled and safe turbine overspeed trip testing.

Optionally TG-13 and TG-17 governor owners who desire to have an API-611 compliant governor may send their governors to Woodward, or a Woodward Authorized Independent Service Facility to be converted to TG611-13 or TG-611-17 governors.

Only Woodward or Woodward Authorized Independent Service Facilities (AISFs) are authorized to purchase TG611 conversion kits and perform TG611 governor conversions. In addition only AISFs who have successfully taken and passed Woodward's official TG611 conversion training program (viewed official TG611 conversion training video and passed Woodward's on-line qualification test) are authorized to perform these conversions.

Woodward's Regional Account Managers are responsible to monitor, track and audit Woodward AISFs to officially validate which of AISFs are authorized to purchase and perform TG611 conversion, and which are not.

Regards,

Rich Kamphaus
Turbine Controls Product Line Manager
